

Asset Retirement Program

eContinuity's Asset Retirement Program is a comprehensive set of services for end of life IT equipment providing our customers logistics capabilities to maximize the financial value, disposal capabilities that exceed strict environmental standards, and security capabilities to protect customer's data.

Information Technology Asset Retirement Program

The Information Technology Asset Retirement Program was designed to fill a gap many businesses do not have a proper internal process for: what to do with end of life IT hardware. Our managed service provides the following key benefits to our customers:

- Maximum return on IT assets
- Reduction in on-site storage of retired IT assets
- Data Security
- Environmental Stewardship
- Inventory Management and Reporting
- Regulatory Compliance
- Indemnification from any compliance risk

Our Asset Retirement Managed Service Program includes the following services:

- Inventory Management
- Asset Recovery
- Data Security
- Asset Disposition

Inventory Management

eContinuity can provide an inventory management process for all your end of life and excess IT assets. Our Inventory Management service includes site pickup and packaging, testing and auditing, storage, and redeployment.

Asset Recovery

Our Asset Recovery service can help you recover the maximum value of your excess IT assets. The service includes pick up of your IT assets at your designated location, shipment of equipment to our facility, cleansing of all data, and valuating the equipment. We will proceed to resell the equipment through our network of wholesale and retail channels.

Data Security

Regulations concerning privacy of customer information mandate effective data removal. Our data wiping procedures meet the Department of Defense 5220.22-M standard and can exceed that standard if you require them. After the data has been wiped, an electronic certificate of data wipe will be provided.

Asset Disposition

IT assets with no remarketing value can be disposed of responsibly and securely through our Asset Disposition service. With our strict zero-landfill policy, all assets will be demanufactured to their commodities components and recycled. Any hazardous materials during this process will be shipped to specialized process plants. e-Continuity Solutions will issue a certificate of data wipe and destruction as proof of responsible electronic asset disposal for your organization.
