

Confidentiality  
Integrity  
Availability

## Overview

eContinuity has developed a service to ensure protection of your Information Systems. We have combined policies, processes, and technologies to create a comprehensive security program for your organization.

## Information Security Professional Services

eContinuity's Information Security Professional Services can provide your organization the expertise needed to improve or create your overall IT security program.

Our Information Security Professional Service can help you meet your security objectives:

- *Availability* - The ongoing availability of systems to ensure authorized users have prompt access to information.
- *Integrity* - Processes, policies, and controls used to ensure information has not been altered in an unauthorized manner and that systems are free from unauthorized manipulation.
- *Confidentiality* - Processes, policies, and controls used to protect information of customers and the organization against unauthorized access or use.
- *Accountability* - Processes, policies, and controls necessary to trace actions to their source.
- *Assurance* - Processes, policies, and controls used to develop confidence that technical and operational security measures work as designed.
